# 前提

### 确保安装了

- 1. git bash
- 2. mobaxterm

## 本地生成公私钥文件

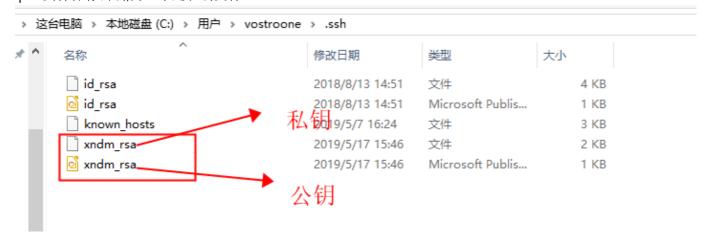

### 进入git bash

```
> ssh-keygen -t rsa -P ""
```

### 输入公私钥文件保存的地址

```
vostroone@DESKTOP-QU8U227 MINGW64 ~ 放置公私
$ ssh-keygen -t rsa -P ""
Generating public/private rsa key pair.
Enter file in which to save the key (/c/Users/vostroone/.ssh/id_rsa): C:\Users\v ostroone\.ssh\xndm_rsa
Your identification has been saved in C:\Users\vostroone\.ssh\xndm_rsa.
Your public key has been saved in C:\Users\vostroone\.ssh\xndm_rsa.
Your public key has been saved in C:\Users\vostroone\.ssh\xndm_rsa.pub.
The key fingerprint is:
SHA256:ii78L3Aqw92CCSAV1K2ANBtP5J5T4sXFZhHPGCgF6Uk vostroone@DESKTOP-QU8U227
The key's randomart image is:
+---[RSA 2048]----+
```

到公私钥文件保存的目录下找到两个文件 .pub文件保存公钥,另一个是私钥文件

# 公钥文件上传到远程服务器

把公钥文件传到远程服务器上,比如通过scp或者rz

# 远程服务器配置公钥

在远程服务器上把这次生成的公钥加到账户的公钥文件里

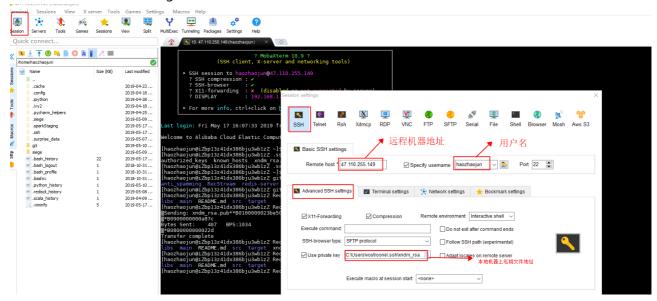

> cat 这次公钥文件地址 >> ~/.ssh/authorized\_keys

```
relcome to Alibaba Cloud Elastic Compute Service!
haozhaojun@iZbp13z41dx386bju3wb1zZ ~]$ cd .ssh/
haozhaojun@iZbp13z41dx386bju3wb1zZ .ssh]$ ls
uthorized_keys known_hosts xndm_rsa.pub
haozhaojun@iZbp13z41dx386bju3wb1zZ .ssh]$ cat xndm_rsa.pub >> authorized_keys
把这次生成的公钥放到用户公钥下
```

# 通过mobaxterm连接

### 首次连接时设置session

- 1. 打开左上角session
- 2. 打开SSH
- 3. 输入远程服务器地址和用户名
- 4. 打开Advanced SSH settings输入本地私钥文件地址

## 之后连接

Voila! 之后点击mobaxterm的session就可以直接连上远程机器了
